01 / EXECUTIVE VIEW

More discovery. Uneven conversion.

Week and month-to-date review of AIM Dental Laboratory's live marketing accounts.

The Instagram Reel is reaching new audiences. Website traffic has grown over the month, but this week is softer and recorded social-to-lead conversion remains unproven.

WEBSITE SESSIONS - MTD
413
226 prior month
+82.7% | GA4

INSTAGRAM VIEWS - MTD
1,550
0 recorded in prior period
No valid growth percentage

RECORDED LEAD EVENTS
18
generate_lead events in MTD
Unique qualified leads unverified

THIS WEEK NEEDS ATTENTION

Website sessions: 76 vs 133 **-42.9%**

Facebook views: 75 vs 298 (-74.8%). Instagram views: 1,510 vs 14.

KEEP: authentic proof and useful workflow content

The October 20 Reel is a strong discovery signal. Organic search delivers much stronger engagement than direct traffic.

FIX: the path from attention to an inquiry

Use a clear next step, tagged profile links and a verified lead event. Meta shows zero link clicks; GA4 records zero social key events.

VERIFY: attribution, profile identity and local data

Two Facebook identities and two LinkedIn pages are visible. GBP has zeros after October 19; recheck freshness before treating the weekly fall as a confirmed demand loss.

Periods vary by source availability; exact dates and limits on pp. 2-3 and 10. Sources S1-S11.

02 / WEEK COMPARED WITH LAST WEEK

A softer week with an Instagram surge.

Primary window: Oct 19-23 vs Oct 12-16, 2026. Shorter matched windows are marked below.

KPI	Current	Prior	Change
Website sessions	76	133	-42.9%
Website engaged sessions	41	54	-24.1%
Website engagement rate	53.95%	40.60%	+13.35 pp
Website key events	4	5	-20.0%
Organic search sessions	23	24	-4.2%
Organic social sessions	10	17	-41.2%
Facebook views	75	298	-74.8%
Instagram views	1,510	14	+1,496 views
Instagram content interactions	76	1	+75 interactions
LinkedIn impressions [A]	138	155	-11.0%
Search Console clicks [B]	8	10	-20.0%
GBP interactions [C]	3	18	Provisional

What explains the website decline?

Direct sessions fell from 78 to 38, accounting for about 70% of the net decline. Organic search was nearly flat. This points first to a direct-traffic or distribution change to investigate, rather than evidence of a broad SEO collapse.

[A] LinkedIn: Oct 19-22 vs Oct 12-15. Calculated by adding the daily organic-impression points; sponsored points were zero.
[B] Search Console: Oct 19-21 vs Oct 12-14, the latest visible search data.
[C] GBP: Oct 19-23 vs Oct 12-16. Oct 20-23 show zero across the interaction table. Reporting completeness is unconfirmed; do not use this alone to judge campaign failure.

pp = percentage points. GA4 key events are event counts, not deduplicated customers. Sources S1, S3, S5, S8-S10.

03 / THIS MONTH COMPARED WITH LAST MONTH

Traffic growth has not lifted every outcome.

MTD: Oct 1–23 vs Sep 1–23. LinkedIn ends on the 22nd; Search Console ends on the 21st.

KPI	Current	Prior	Change
Website sessions	413	226	+82.7%
Organic search sessions	95	48	+97.9%
Website engagement rate	38.50%	39.38%	-0.88 pp
generate_lead event count	18	0	+18; baseline flag
Organic social sessions	33	4	+29; small base
Facebook views	508	105	+383.8%
Facebook content interactions	26	2	+24; small base
Facebook profile visits	15	42	-64.3%
Instagram views	1,550	0	+1,550; no %
Instagram content interactions	82	0	+82; no %
Instagram profile visits	27	1	+26; small base
LinkedIn impressions [22nd]	425	594	-28.5%
LinkedIn reactions [22nd]	6	2	+4; small base
GBP interactions*	56	71	-21.1%
GBP call-button clicks*	8	18	-55.6%
GBP website clicks*	16	22	-27.3%
GBP directions*	32	31	+3.2%

Read the baselines before reading the percentages

A zero prior lead-event or Instagram-insights count does not prove there were no real inquiries or views. Confirm measurement continuity. ***GBP comparisons are calculated from daily rows for days 1–23; current zeros after Oct 19 make these provisional.** Search Console: 45 vs 32 clicks (+40.6%), with September coverage also needing verification.

No full October-versus-full September comparison is implied. Periods are incomplete by design. Sources S2, S4, S6–S7, S9–S10.

04 / WEBSITE AND LEAD QUALITY

Organic search brings engaged visitors.

GA4 monthly channel view: Oct 1-23 vs Sep 1-23. Key events were checked against generate_lead.

ORGANIC ENGAGEMENT
67.37%
Direct: 25.68%
Higher-quality attention signal

ORGANIC KEY-EVENT RATE
6.32%
Direct: 3.50%
Session rate; not sales close rate

SOCIAL KEY EVENTS
0
33 social sessions in MTD
Conversion path needs work

Channel	Sessions now / prior	Lead events	Engagement
Direct	257 / 146	9	25.68%
Organic Search	95 / 48	6	67.37%
Organic Social	33 / 4	0	39.39%
Referral	25 / 24	3	56.00%

What we are doing well

Search sessions nearly doubled month to date. Search contributed 6 of 18 recorded lead events from 23% of sessions. Weekly search engagement also improved to 82.61% from 66.67%, even as overall traffic fell.

What can improve

Direct makes up 62.2% of monthly sessions but averages only 10 seconds of engagement. Audit internal/test traffic and campaign tagging before interpreting that mix. Review the real form-to-CRM path; September has zero generate_lead events, so the apparent lead uplift may partly reflect a tracking change.

Missing business outcomes: qualified new-practice inquiries, first cases and attributed revenue were not verified. GA4's $0 reported revenue does not establish actual sales. Weekly channel rows sum to 77 versus 76 in the total row; the one-session discrepancy remains unresolved.

Monthly: 159 vs 89 engaged sessions. Weekly session key-event rate: 5.26% vs 3.76%. Sources S1-S2.

05 / SEARCH VISIBILITY AND SITE HEALTH

More clicks. Review ranking and URL signals.

Search Console: Oct 1–21 vs Sep 1–21. Impressions and CTR below use rounded UI figures.

SEARCH CLICKS
45 vs 32
+40.6%
Weekly: 8 vs 10 (-20%)

SEARCH CTR
2.5%
Prior: 2.1%
About +0.4 percentage points

AVERAGE POSITION
17.1
Prior: 9.3 | worse by 7.8
Query mix can affect this

Page / URL group	Clicks now / prior	Impressions now / prior	Next move
HTTPS homepage	27 / 22	568 / 331	Keep brand clarity
GBP-tagged homepage	9 / 0	293 / 0	Check canonical choice
HTTP homepage	3 / 9	211 / 371	Verify HTTPS redirects
/services	0 / 2	187 / 87	Improve intent and snippet
Digital trends article	1 / 0	186 / 468	Investigate lost exposure

Flag: search identity is fragmented

Three homepage URL variants received clicks. This is a reason to inspect redirects and Google-selected canonicals, not proof of a canonical error. Keep campaign tags for attribution while checking that the clean HTTPS homepage is the intended canonical.

Keep the content, improve the click opportunity

The services page has more impressions but zero current clicks. Improve its title, description and service-specific proof before adding more generic posts. At least 29 of 45 monthly clicks came from four visible AIM-branded queries. Expand qualified non-brand demand. Review the 25 not-indexed URLs by reason; many exclusions can be intentional.

Overview snapshot: 48 indexed, 25 not indexed; no Core Web Vitals field data. Sources S3–S4; GSC overview.

06 / SOCIAL MEDIA

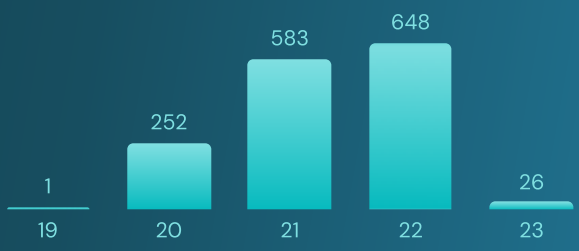

Instagram breaks through. Build the next step.

Meta periods: Oct 19–23 vs Oct 12–16; MTD Oct 1–23 vs Sep 1–23. Account identities matter.

INSTAGRAM / THIS WEEK

1,510 views

14 prior week | 76 interactions vs 1
21 profile visits vs 0.
Zero recorded Meta link clicks.
Scale the next step, not just the view count.

OCTOBER / DAILY VIEWS (PT)

Facebook: distribution softened

Views fell to 75 from 298 this week. MTD views rose to 508 from 105, but profile visits fell to 15 from 42 and follows to 1 from 2. Reels supplied 54.7% of weekly views. Make the action visible in the first frame, caption and profile link.

LinkedIn: fewer impressions, more dialogue

MTD impressions: 425 vs 594 (-28.5%). Reactions: 6 vs 2; comments: 10 vs 0. Weekly matched Mon–Thu impressions: 138 vs 155. The 75-year video has 4 clicks from 41 lifetime impressions; promising, but too small to declare a winning format.

Repeat the useful idea with genuine lab evidence

The October 20 Reel leads native Instagram content at about 1.4K views. Use real technician/process footage, a clear opening hook and one CTA: follow, save, message or schedule a pickup. The native rolling-seven-day panel shows 99.9% non-follower views; this audience still needs nurturing.

Profile identity and measurement flags

Managed audience snapshots: **Facebook 5, Instagram 8, LinkedIn 70 followers**. Older Facebook /aimdentallab and LinkedIn /aim-dental-lab pages also appear; the older LinkedIn page has 148 followers. Confirm ownership and the preferred destinations before changing links or consolidating pages. MTD Instagram: 1,550 views, 82 interactions, 27 visits; prior insights show 0, 0 and 1. No valid percentage increase exists for a zero baseline.

LinkedIn MTD ends Oct 22. Lifetime post metrics and native rolling data are supplementary, not period comparisons. S5–S9, S11.

07 / LOCAL SEARCH AND TRUST

Validate local activity and strengthen trust.

GBP MTD is computed from daily rows for Oct 1–23 vs Sep 1–23. Treat current figures as provisional.

Call-button clicks

−55.6%. These are taps on the call button, not verified answered calls or new clients.

Website clicks

−27.3%. Check that the profile destination and its tagged website journey work on mobile.

Directions requests

+3.2%. Useful local intent, but not equivalent to a qualified dentist inquiry.

56 reported interactions

71 in the matched prior month (−21.1%). Directions account for 32 of the current 56 actions. Weekly: 3 vs 18, with zeros shown after Oct 19.

4.1 stars / 8 reviews

Small review base. The newest visible review was 13 weeks old. Recent owner responses were visible on older positive and negative reviews.

Do not overreact to the recent zeros

Reopen the daily view after reporting catches up. If Oct 20–23 remains zero, then inspect local visibility, calls and landing-page activity.

Next actions

Check profile hours, service links, photos and the pickup CTA. Request genuine feedback from recent client practices and log answered calls, qualified inquiries and first cases separately.

Reviews are a current snapshot, not a weekly trend. GBP data may lag; daily zero values are not independently confirmed. Source S10.

08 / PRIORITIZED ACTION PLAN

Turn attention into new-practice demand.

Suggested owners and deadlines below are recommendations. No account changes, posts or messages were made.

P1 / NEXT 2 BUSINESS DAYS — Web + Media + Sales

Prove the inquiry tracking

Test form success and event deduplication; confirm generate_lead matches CRM records. Check when tracking began and exclude internal/test activity.

Done when: each real submission has one lead record, one intended event and a source.

P1 / THIS WEEK — Media + account owner

Choose the official social destinations

Inventory current and legacy Facebook/LinkedIn pages. Confirm access and approved handles; align website, GBP and email signature links.

Done when: one approved destination per network is documented and linked consistently.

P1 / THIS WEEK — Web + SEO

Audit search URL and snippet opportunities

Inspect HTTP redirects and selected canonicals for clean/tagged homepage URLs. Review /services and /about snippets against actual query intent.

Done when: canonical/redirect findings and revised high-intent snippets are reviewed.

P2 / NEXT CONTENT CYCLE — Media + lab team

Repeat the Reel idea with a direct next step

Capture a real case workflow, technician QC and pickup tutorial. Publish a small test set with one CTA and tagged profile links.

Done when: views, profile visits, link sessions and inquiries are read together per post.

P2 / NEXT 2 BUSINESS DAYS — Media + front desk

Validate the GBP decline and strengthen trust

Recheck daily freshness, verify contact paths and review unanswered feedback. Add a simple review request to normal client follow-up.

Done when: recent daily rows are confirmed and call/inquiry outcomes are logged.

P2 / WEEKLY SALES REVIEW — Sales + Media

Connect marketing to first cases

Record source, qualification, first case date and value for new-practice inquiries. Review follow-up speed and loss reasons.

Done when: the lead-to-first-case funnel has counts and owners, beyond GA4 events.

Priorities are based on observed gaps and opportunity, not an attribution experiment. Recommended actions require execution and review.

09 / KPI OPERATING SCORECARD

Track the full path from visibility to first case.

Operating alerts below are proposed starting points, not industry benchmarks or promised results.

KPI	Current baseline	Decision rule / definition	Owner / cadence
Website sessions	76 weekly	Investigate a >20% fall vs matched weekdays.	Media / weekly
Organic search quality	23 sessions; 82.61% engagement weekly	Flag engagement below 60% or a sustained session decline.	SEO / weekly
Lead events + real inquiries	4 events weekly; 18 MTD	Reconcile event count to real inquiries before setting a growth target.	Web + Sales / weekly
Qualified inquiry rate	Not verified	Qualified new-practice inquiries / all real inquiries; establish baseline.	Sales / weekly
First-case conversion	Not verified	New practices sending first case / qualified inquiries; use cohorts.	Sales / monthly
Search clicks + CTR	45 clicks; 2.5% CTR MTD	Review high-impression, low-CTR pages; separate brand/non-brand.	SEO / weekly
Indexing + URL health	48 indexed; 25 not indexed	Flag excluded intended service pages or unexpected canonicals.	Web / weekly
Social discovery to action	IG: 1,510 views; 21 visits weekly	Track profile visits, saves, tagged site visits and inquiries per post.	Media / weekly
Social lead contribution	33 sessions; 0 key events MTD	If sessions grow but no inquiries, inspect CTA, journey and tracking.	Media + Web / weekly
GBP intent actions	8 calls; 16 site clicks; 32 directions MTD	Validate freshness, then review declines in calls and website clicks.	Media / weekly
Trust + response	4.1 stars; 8 Google reviews	Track genuine new reviews, response coverage and inquiry response time.	Operations / weekly
Qualified pipeline value	Not verified	Value of new-practice cases tied to tracked inquiries; define attribution.	Sales / monthly

Weekly review rhythm

Check completeness → compare matched dates → select 3 priorities → assign owners → revisit outcomes.

A zero, an unavailable metric and an unverified metric are different states. Do not replace missing business outcomes with zeros.

10 / EVIDENCE AND INTERPRETATION

Source register and comparison rules

Collected in the Chrome Media (aimdentallab.com) profile; live reporting snapshot reviewed Oct 24, 2026 (Asia/Manila).

Method. Compare the same completed weekdays and equal date spans. Change = (current / prior - 1) x 100; rate changes use percentage points. Month-to-date is not a full-month forecast. Totals are read from KPI cards; additive daily rows are summed where needed. Unique reach/viewers are not summed across days or platforms.

S1	**GA4 weekly acquisition**	Oct 19-23 vs Oct 12-16; sessions, channel quality and key events.
S2	**GA4 monthly acquisition**	Oct 1-23 vs Sep 1-23; generate_lead filter verified at 18 vs 0.
S3	**Search Console weekly**	Oct 19-21 vs Oct 12-14; latest visible search day Oct 21.
S4	**Search Console monthly and pages**	Oct 1-21 vs Sep 1-21; earliest visible chart data Sep 9. Verify prior coverage.
S5	**Instagram weekly - Meta Results**	Oct 19-23 vs Oct 12-16; exact views, interactions and profile visits.
S6	**Instagram monthly - Meta Results**	Oct 1-23 vs Sep 1-23; zero prior insight counts require a continuity check.
S7	**Facebook monthly - Meta Results**	Oct 1-23 vs Sep 1-23; views, interactions, visits, follows and link clicks.
S8	**Facebook weekly views**	Oct 19-23; prior Oct 12-16 read separately. Dashboard auto-change was not used.
S9	**LinkedIn managed company analytics**	Company 133354035; MTD ends Oct 22. Weekly impressions use daily chart points.
S10	**Google Business Profile**	Profile 4512821916893325204; daily interactions, calls and site clicks. Review snapshot.
S11	**Native Instagram account insights**	Rolling 7/14/30-day panels; used only for supplementary content/audience context.

Limits. Meta date picker explicitly uses Pacific Time; GA4 uses its property reporting dates (timezone not verified). Search Console daily data uses Pacific Time. LinkedIn and GBP date labels were retained as served. GA4 data can revise for 24-48 hours. GBP zeros after Oct 19 are provisional. Recent platform metrics were not reconciled into unique people, qualified clients or revenue. X profile opened but analytics could not be captured reliably; YouTube channel analytics were not verified.

Metric guidance: Google Analytics freshness | Business Profile performance definitions | Search Console data and time zones. GBP calls measure call-button taps. Social views, impressions, reach, profile visits and GA4 sessions describe different steps and must not be added together.

Links open source dashboards and may require the same account. Recommendations are analytical judgments, not proven causal effects.
